Product Description

ADC-0809 Interface

The ADC 0809 interface board is designed to explain the analog to digital conversion using ADC 0809 chip .This interface card is compatible to interface with Embedded, FPGA development boards and sensors to be used in real time projects also. Stand alone working mode is the special feature of this card. The ADC 0809 interface card is a perfect platform for learning about the basic concepts of ADC operation.

Compatible Devices AT89S51, AT89S51, 8051 and all other microcontroller

Additional Features 8 channel analog input, Supply Voltage :- 5V DC

Included Components ADC0809 breakout board with ADC0809 IC

Number Of Items 1

Voltage 5 Volts

Power Source DC

Batteries Included No
