### Product Description

Bunsen Burner - Scientific Equipment

Adjusting the gas valve on the Bunsen burner changes the volume of gas flow the more gas entering the burner, the larger the flame.

The collar at the base of the barrel contains air holes to control the amount of oxygen reacting with the gas.

A Bunsen burner, named after is a common piece of laboratory Equipment that produces a single open gas flame.

It is used for heating, sterilization, and combustion.

The gas can be natural gas (which is mainly methane) or a liquefied petroleum gas, such as propane, butane, or a mixture of both.

#### **Feature -**

Wide & stable base provide.

With threaded air regular.

With collar.

Fitting on nicely duco painted.

Iron base.

Nicely Packed in box
