Product Description

Deflagrating Spoon (Brass) - Laboratory Equipment

Deflagrating-spoon (chemistry) A long-handled spoon with a cover. Lowered into a glass vessel filled with a gas to demonstrate deflagration.

A deflagration spoon is used in chemistry experiments when the burning of [phosphorus](#), sulfur or another substance is required.

It is capable for high temperatures.

It is equipped with features to facilitate working in this environment.

Such as a long handle angled to keep heat away from the hand.

Available in:

Brass wire & Brass disc

Export quality
