Product Description

NICHOLSON HYDROMETER LARGE 2" - Physics Equipment

Nicholson's hydrometer is a specialized device designed by our expert team for specific gravity, volume and weight related experiments.

It is a major device for the physical science experiments and requires precision as well as perfection.

This is the original hydrometer which is made up of brass core and finished extremely well by baked enamel finish.

This hydrometer is highly recommended for depth related experiments too and hence it finds a wide scale application.

For density experiments on solids liquids, hollow metal body, upper loading pan weighted lower loading pan, made of brass.

Features

Cylinder height x diameter: 400 mm x 75 mm

Brass baked enamel finish
