Product Description

Two Stage Air Compressor Test Rig - Engineering Equipment

Heat Engine Lab unit consist of one experimental type two stage reciprocating air compressor air cooled inter cooler, suitable for a pressure of 12 kg/ Cm² & having a displacement of 0.168 M³ /min. driven by squirrel cage induction motor of 2 H.P. Energy meter & stopwatch to determine the input to the motor. The above motor suited for 400/440 V. 3 ph. 50 cycles A. C. supply. The motor is provided with switch & starter.

Feature

Compressor: Two stage with inter cooler.

- Diameter of LP Cylinder: 55 mm
- Diameter of HP cylinder: 50 mm
- Stroke Length: 65mm
- Compressor Speed: 720 rpm
- 2HP A/C Motor

- Air intake Measurement: M/S Tank with Orifice-meter and Manometer
- Bourdon Tube Pressure gauges to measure the pressures.
- Three Phase energy meter.
- Multi-channel temperature Indicator to measure various Temperatures.
- Pressure relief valves.
